Thank Heaven For The 3.7

Ford delivers a complete new style of performance with the release of the 2011 3.7L V6 Mustang. This aggressive sport coupe features an all-aluminum 305HP engine completely redesigned to produce unmatched power and efficiency. With the release of this new mustang, Airaid Filter Company seized the opportunity and designed their newest MXP Series intake system.

This MXP intake is a complete one-piece cold airbox featuring a blade style weather strip that keeps the engine heat away from the filter. Airaid's high flow premium filter consists of a urethane body that won't crack or shrink and is available in either oiled or non-oiled filtration technology. The kit also comes with a roto-molded intake tube designed to maximize airflow and all the necessary hardware for a complete installation.

+13 HP
