Kawasaki Teryx 750 Cold Air Intake System

POWER & PERFORMANCE!

Teryx Cold Air Intakes!

Airaid Filter Company and PJ Jones have teamed together and are proud to announce their introduction into the Off Road UTV market with the new performance intake system for the Kawasaki Teryx 750. This new intake system dramatically increases airflow over the stock system while improving overall power and performance. Dyno tests show increases of up to 4 HP over the stock system.

The kit comes with an Airaid Premium Filter with SynthaFlow® technology and a pre-filter is included for extreme conditions. The filter is sealed safely inside a roto-molded airbox which allows the Teryx to charge aggressively through water and mud. As with all AIRAID/PJ products these kits Bolt-On in minutes without any additional tuning required.

All AIRAID/PJ UTV kits come complete with all the necessary hardware, detailed instructions and everything needed for a complete installation.

Strategically Located Inlet
Allows more clean air into the engine

Roto-Molded Cold Air Box
Minimizes Dirt Exposure

Oversized Filter
More Surface Area
Extends Cleaning Intervals

Pre-Filter Included
Increases Ride Time
