Polaris RZR Cold Air Intakes!

Airaid Filter Company and PJ Jones have teamed up once again to announce their newest UTV performance intake system for the Polaris RZR 800. This new intake system dramatically increases airflow over the stock system while improving overall power and performance. Dyno tests show increases of up to 4 HP over the stock system.

The kit comes with an Airaid Premium Filter with SynthaFlow® technology to extend service intervals and increase ride time. The filter is sealed safely inside a roto-molded airbox to minimize dirt exposure. Also available is an optional snorkel attachment which allows the RZR to charge aggressively through water and mud. As with all AIRAID/PJ products these kits simply Bolt-On without any additional tuning required.

All AIRAID/PJ UTV kits come complete with all the necessary hardware, detailed instructions and everything needed for a complete installation.

Snorkel Attachment
For Deep Water Forging
(sold separately)

Massive Air Inlets
