GM 2500/3500 6.6L Duramax Diesel

AIRAIID Filter Company has figured out the secret to improved throttle response in the Duramax Diesel while also gaining more horsepower and torque. AIRAIID's latest MXP Series cold air intake system for the "LLY" & "LB7" Duramax directs air directly to an AIRAIID Premium Filter, the heart of the system. The computer-designed system seals against the hood to ensure cool, outside air is fed to the intake through the massive air inlets.

The new Airaid MXP intake system replaces the restrictive stock intake system with a one-piece roto-molded airbox and specially designed intake tube constructed from x-linked polyethylene for improved airflow, heat resistance and proper mass air sensor location. This kit also includes a high flow premium air filter that is washable and reusable. The filter is available with either SynthaFlow® composite or our newest SynthaMax® Non-Oiled filtration technology providing additional airflow through the massive air inlets in the one piece intake box. The end result is dramatically improved throttle response and unmatched horsepower gains over stock.

**NEW
MXP's**

P/N 200-229*[^] oiled
P/N 201-229*[^] non-oiled
[^]Does not fit 2005 GMC LLY motors.

P/N 200-266*[^] oiled
